

DESKTOP PRINTABLE FILE FOLDER BLANK AND FILING SYSTEM

ABSTRACT OF THE INVENTION

A file folder blank can be folded to form a file folder. The file folder blank is designed for single side printing. The file folder blank can be folded to reveal printed indicia to two directions of a single panel. The printed indicia can be printed by a standard desktop type of printer. The printed indicia can include graphics, location indicator, content indicators, pictures, graphs or the like. In addition, top taps or side tabs are integrally formed with the file folder blank that can be printed with identifying indicia. In some applications, the identifying indicia comprises a repeating set of color bars that can be individualized during printing of the folder blank.
